

Steel Stair Temporary Handrail Solution

Your stair contractor finally shows up with only steel stringers and treads.

He informs you that he plans to install the stringers and treads, then field measures for the handrails.

Your other trades are using ladders to access the upper floors—so what do you do?

RED DANGER TAPE is not going to keep the workers out of the unfinished and unsafe stairwell. Some will still try and access the unsafe area no matter what you do.

SAFETY MAKER, INC. has the solution for you!

The StringerShield® Stair Rail System easily clamps onto the unprotected edge of the stringer channel without drilling or damaging the stairway structure.

The StringerShield® Stair Rail System is a one of a kind product—utilize this exclusive, low-cost stair rail system today!
