

Unique Fall Protection Solution

Your employees need to work on an unfinished balcony without guardrails, the interior of the unit has drywall installed and no place to tie-off. They had seen someone else using a door jamb anchor and they thought they could build their own.

We see things like this quite often. It's not only dangerous and illegal, but it magnifies the lack of training. Not a good look for your project site.

SUPER ANCHOR SAFETY, INC. has the solution for you!

Their heavy-duty **Door & Window Safety Bar** is ideal

for interior tie-off protection by utilizing a window or door opening. This anchor is placed against the door or window frame and adjusts to the vertical sides giving you a safe, secure temporary anchor point. It fits openings from 24" to 48" wide. The anchor is fully adjustable, lightweight and easy to install.

- ◆ **Single user tie-off point**
- ◆ **Use with vertical lifeline or SRL**
- ◆ **Lightweight Aluminum Construction**

- ◆ **Perfect for use during construction phase and in finished structures**
